

Please support and facilitate research and development of wireless mesh networking in the spectrum between 3650 and 3700MHz; It is vital to community and educational investigation into the use of wireless networks in urban and rural environments. Please do not obstruct or jeopardize, in any way, the primary function in this band of low-power transmissions at the community level. It would be a terrible precedent to establish a first-in-time, first-in-right site licensing regime for high-power in a so-called "unlicensed" frequency (which would jeopardize community and educational research and development of unlicensed networks). Please give communities and colleges an opportunity to work with this spectrum to experiment and explore how it can benefit communities and school children.
